

We claim:

1. A handheld mobile image-sensing device that comprises
a support structure;
an image sensor positioned on the support structure for sensing an image;
5 a display positioned on the support structure and operatively connected to the
image sensor for displaying the image sensed by the image sensor;
a printing mechanism that is positioned on the support structure and operatively
connected to the image sensor to print the image sensed by the image sensor; and
a remote transmission arrangement positioned on the support structure and
10 operatively connected to the image sensor to transmit data representing the image.
2. An image-sensing device as claimed in claim 1, in which the image sensor is in the
form of a camera device capable of storing images on demand.
- 15 3. An image-sensing device as claimed in claim 1, in which the printing mechanism
includes a pagewidth printer and processing circuitry to control operation of the printer.
4. An image sensing device as claimed in claim 3, in which the printer includes a
pagewidth printhead and an ink distribution unit that is positioned on the printhead to
20 supply ink to the printhead.
5. An image sensing device as claimed in claim 4, which includes a print media feed
mechanism for feeding print media relative to the printhead so that a printing operation
can be carried out on the print media.
- 25 6. An image-sensing device as claimed in claim 1, in which the remote transmission
arrangement is in the form of a mobile telephone system.

7. An image-sensing device as claimed in claim 1, in which the display is a color, LCD display.
